## DETAILED ACTION

### ***Response to Arguments***

1. The Applicants' arguments and amendments filed on June 29, 2006 have been fully considered and are persuasive.

### ***Allowable Subject Matter***

2. *Claims 1-25 are allowed. The claims indicated include limitations that the prior arts of record do not appear to teach or render obvious, hence they are allowed.*
3. The following is an examiner's statement of reasons for allowance:  
*As presented in the previous Office Action, Brown et al. (US006405192B1) teaches "a method for browsing the Internet. According to a preferred embodiment, a browser retrieves a web page for presentation to a user. While the web page is being presented, using one or more background threads, the web page is parsed for a set of links to a set of linked web pages and that set of linked pages are retrieved" (Brown, col.2, lines 16-21) from their respective locations. Also presented in the previous Office Action, Becker et al. (US006834372B1) teaches of "[presenting] a data-packed report of various useful characteristics from the user's past visit(s) to that web site" (Becker, col.2, lines 60-61) "in a pop-up window or 'bubble'" (Becker, col.9, line 66) "when the [user] passes the cursor over the displayed hyperlink" (Becker, col.8, lines 66-67). In addition, "such characteristics may include, for example, the data's size, date of last download, expired*

*or “under construction” status of web site, errors occurring during the download, etc.”*

(Becker, col.2, lines 14-17).

However, the prior arts of record fail to teach or suggest individually or in combination as stated in the independent claims for *“fetching current information from each linked web page, the information regarding the web page to which each link points, wherein the fetching comprises accessing each linked web page and retrieving information from each linked web page such that current information is then stored separately from the current web page once fetched; assembling relational information based on the current fetched information from each linked web page and based on previously stored historical information, the relational information including at least one newly generated historical relationship between the current fetched information and the previously stored information regarding a user of the client-side computer; displaying the current web page; and, displaying an informational region in response to a cursor hovering over a particular link of the one or more links, the region including the current information previously fetched regarding the web page to which the link points and the relational information previously assembled,”* and in combination with other limitations as set forth in the independent claims, as well as Applicants’ arguments presented on pages 9-29 of the Amendment filed on June 29, 2006.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
